Test Project

Module B – Windows Environment

Secret Task

IT Networks and Systems Administration

Submitted by
Sim Cher Boon - GrabTaxi Holdings Limited, Independent Test Project Designer
Timon Frey, Independent Test Project Validator

Introduction

After the successful integration of the Beijing office, the Marketing Department at GoldenHorse requested its own internal web portal. The portal will be used to publish marketing campaigns, brand assets, and internal announcements.

To ensure secure access, the website must use **Microsoft Active Directory Authentication**.

Only employees who are members of the Active Directory security group **SG-MKT** are allowed to access the website. Users who are not members of this group must be denied access, verify that unauthorized users receive an appropriate access denied message.

Secret Task: WEB1 / WEB2 Cluster

Internet Information Services (IIS)

1. Add Windows Authentication to the Web Service on WEB1 & WEB2
2. Create a new site mkt.shanghai.local
3. Create a simple html page that is saved on the iSCSI drive E:/MKT/index.html
   (a) Note you are not assessed on the content of the page, you simply need to display a welcome page
4. Ensure that only users from the SG-MKT group can access the site.
5. The mkt site should be accessible from every Client computer
